KEY TRACKER®

What is ULTIMA

It is the ultimate electronic key management system allowing you to monitor and control key access remotely.

Using the latest in biometric security technology, ULTIMA not only gives 24-hour key control, but raises the alarm via text message, email or on-screen message, with both the user and up to 5 managers, the moment a key return is overdue.

ULTIMA allows managers to enable and disable user and key access immediately from any internet linked device for optimum flexibility. With users only gaining access using a proximity card, pin number or having their identity checked by fingerprint, it provides the ultimate solution in key security and control.

"The average company spends 6.2 person hours per week looking for lost or misplaced keys. ULTIMA's audit trail can help find these keys in seconds."

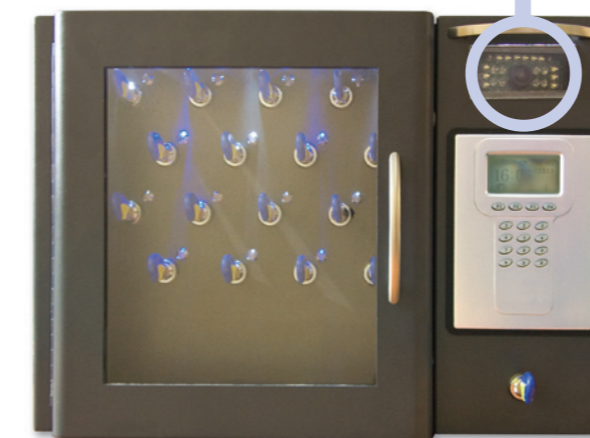

ULTIMA - 40
(w 570mm h 780mm)

Features

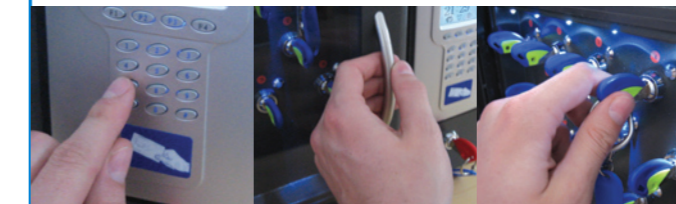

- Comprehensive embedded key management software
- Anti-tamper system
- Immediate overdue alarms
- Built in camera to record 3 photos every time a key is taken or returned
- Individual and sets of keys have a time limit established on set up
- Bright LED night lighting
- Built in battery back up with auto checking
- Built-in Excel and Word report generation
- Access controlled via proximity card, pin number or fingerprint technology
- Two options, ULTIMA 16 & 40 linked up to 640 keys

Benefits

- Total 24-hour key control with remote access
- Overdue alarms sent via text message, email or on screen message
- Total flexibility over users and access dates and times

ULTIMA - 16
(w 475mm h 340mm)

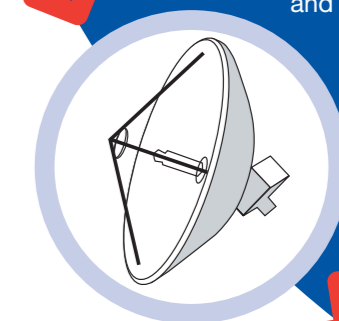

Any number of ULTIMA systems can be linked and controlled by a single control box, via any internet linked device across the world.

Overdue Alarm System

1. Time exceeded activates alarm

2. Message via GSM and Internet

3. E-mail message, webpage alarm & text message received
